pdActive

Enterprise Security and Threat Management

Integrated Dual-Factor Authentication Access Control, Intrusion, Event Triggers, and Bad Actor Identification.

Use Case

- Trusted list: employees, contractors, visitors

- Merge access control and surveillance for robust path indexing

- Authorized visitor monitoring

- Enterprise-wide threat list enforcement

- Enterprise-wide unknown person detection / learning

- Real-time actionable alerts

Enterprise IN RealTime™ by pdActive locates employees, vendors, visitors, and unknown guests in real time, allowing you to secure your people and assets. Rather than managing a complex set of "system silos" and cumbersome video tools, Enterprise IN RealTime provides a unified management console with targeted alerts and video event tagging.

Developed to meet the requirements of the most stringent public security applications, Enterprise IN RealTime provides non-contact, biometric identification, path, and activity analysis.
Now, you can:
- Secure your IT network and high value assets from intruders
- Find tailgaters that gain access to your facility
- Find stolen badges
- Monitor disgruntled former employees and contractors
- Thwart impostors with LiveID™

**Someone is in your network right now.
And you don't know because
your people are only human.**

You need Enterprise IN RealTime.
